

# Anti-Freeze, Anyone?

By Anna Von Reitz

A recent article in The Epoch Times notes that people with allergies should not take the vaccine for "Covid-19" -- and then, helpfully, goes on to list the ingredients:

"The components are listed as follows: lipids (0.43 mg (4-hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate), polyethylene glycol, N,N-ditetradecylacetamide, 1,2-distearoyl-sn-glycero-3-phosphocholine, cholesterol, potassium chloride, sodium chloride, monobasic potassium phosphate, dibasic sodium phosphate dihydrate, and sucrose."

Polyethylene glycol is a relative of ethylene glycol, the main ingredient in anti-freeze, which regularly kills animals.

Polyethylene glycol is not as toxic as ethylene glycol, but it is definitely known to harm people who have kidney problems. Attacking the kidneys and electrochemical balance of the body is the way that ethylene glycol kills, so polyethylene glycol is still a poison, just not as clear-cut about how long it takes to harm the same tissues, and at what concentration it becomes a true poison.

I think I can safely say no on that one.

Potassium Chloride can also be a problem. Even though potassium salts used to be far more common in our agrarian diet, many of us are quite allergic to any significant amount of Potassium Chloride.

I am definitely allergic to that.

And dibasic sodium phosphate dihydrate --- here's the list of common side effects:

Common side effects may include:  
nausea, vomiting, stomach pain,  
diarrhea;  
bone or joint pain;  
headache, dizziness, tired feeling;  
muscle pain or weakness;  
increased thirst;  
or numbness or tingly feeling

With all that to choose from, who needs a virus? You can get just as sick from the cure.

But do you notice that in this long, ugly sounding recitation of ingredients, there is something missing? None of the chemicals listed are the active components of an anti-viral vaccine based on the injection of patented mRNA. There isn't a single reference to any form of DNA or DNA components in the ingredient list, yet we know that any vaccine for a virus has to contain these.

Why aren't they mentioned, when they are the main "payload" of this whole vaccine fiasco? Oh, I forgot. The Guilty Parties including the CDC and NIH copyrighted the gene sequences of Covid-19 and they prohibit anyone from referencing the virus they invented or its components.

So far we've been too chicken to ask exactly how these morons were able to obtain a Patent or a Copyright on a "product" that serves no lawful purpose at all?
